Revision History

Revision	Date	Updated By	Updated Comments
1	15.08.2026	Brishty Das	Started the SQT project report, defined the basic project information, testing scope, background, and test-plan structure.
2	18.08.2026	Brishty Das	Completed the main requirement review, system features, quality attributes, and initial testing plan.
3	24.08.2026	Brishty Das	Completed the design of the 20 formal test cases and prepared the required test data.
4	02.09.2026	Brishty Das	Reviewed the system interfaces, testing approach, user flows, responsibilities, and testing schedule.
5	07.09.2026	Brishty Das	Completed manual test execution and recorded the actual results and Pass/Fail status.
6	10.09.2026	Brishty Das	Reviewed failed test cases, completed re-testing and defect verification, and prepared the test-execution summary.

1. TEST PLAN IDENTIFIER: TP-AT-1.0

This test plan is identified as TP-AT-1.0, where AT represents Admission Tracker and 1.0 represents the first version of the plan.

The purpose of this test plan is to organize the software testing activities for the Admission Tracker system. It covers the main requirements, system features, testing levels, test cases, expected results, acceptance criteria, responsibilities, schedule, risks, and approval process.

The plan mainly focuses on the student-side functions of Admission Tracker, such as registration and login, entering SSC and HSC information, finding eligible universities, viewing university details, comparing universities, bookmarks, notifications, preparation books, payment flow, university application, and profile settings.

2. REFERENCES

- System interface screenshots and design documents.

3. INTRODUCTION

Background to the Problem

After completing HSC, many students in Bangladesh find it difficult to choose a suitable university. They have to collect admission information from different university websites, social media pages, coaching centers, and other sources. Because the information is spread across many places, students may become confused about admission requirements, tuition fees, available programs, rankings, and student reviews.

Another problem is that students do not have one simple platform where they can enter their SSC and HSC results and check which universities match their academic qualifications. Students from semi-urban areas may also have less access to proper admission guidance.

Solution to the Problem

Objective

The main objective of Admission Tracker is to make the university selection process easier and more organized for Bangladeshi students. The system is designed to help students find suitable universities by using their SSC and HSC results and showing relevant admission information in one place.

It also aims to reduce the time students spend searching different sources and help them make better decisions based on their eligibility and preferences.

Proposed Solution

Admission Tracker provides the following main functions for students:

- User registration and login
- SSC and HSC information input
- University eligibility matching
- Matched university list
- Detailed university profiles
- University comparison
- Student feedback and rating
- Bookmarking preferred universities
- Admission-related notifications and updates
- User profile and settings
- University preparation books
- Book payment flow
- University application flow

These features are included in the original Admission Tracker project scope.

Software Quality Assurance and Testing

For the SQT part of the project, the main focus is to prepare a proper test plan for the important functions of Admission Tracker. The planned testing activities include:

- Functional test-case preparation
- Positive and negative test cases
- Registration and login testing
- Academic information input testing
- Eligibility matching testing
- University profile and comparison testing

- Bookmark and notification testing
- Book purchase and payment-flow testing
- University application-flow testing
- Profile and settings testing
- Pass/Fail criteria
- Risk identification
- Test documentation and reporting

Existing Solutions vs. Proposed Solution

Feature	**Existing Admission Information Sources**	**Proposed Admission Tracker**
Centralized university information	Not availabe	Yes
SSC/HSC based eligibility matching	Usually not available	Yes
University profile information	Available separately	Yes
University comparison	Limited	Yes
Student feedback and rating	Scattered	Yes
Bookmark option	Limited	Yes
Admission notifications	Available from separate sources	Yes
Preparation book information	Separate sources	Yes
University application flow	Separate university platforms	Yes
Student profile and preferences	Limited	Yes

The main difference is that existing information is usually available from separate sources, while Admission Tracker is designed to bring the important admission-related information and student activities together in one place. This directly addresses the lack of a centralized platform identified in the project problem statement.

Target Users and Benefits

- **HSC Graduates:** Can find suitable universities and admission information more easily.
- **Parents and Guardians:** Can use organized information to help students make university decisions.
- **Career Counselors:** Can use the system as a supporting source when guiding students.
- **NGOs Supporting Students:** Can use the available information to guide underprivileged students more effectively.

These target groups are also identified in the Admission Tracker project documentation.

Testing Scope Limitation

The current Admission Tracker project is limited to the designed system flow and interface. Full backend development, database implementation, and real system integration are not included in the current project scope.

Therefore, the SQT report mainly prepares test cases for the visible functions and expected user flows. Backend operations, real database activities, actual payment-gateway processing, and other features that require a fully developed system will remain outside the present testing scope.

4. REQUIREMENT SPECIFICATION

4.1 System Features

The following system features are included in the Admission Tracker project. Each feature contains the main functional requirements, priority level, and precondition.

1. User Registration

Functional Requirements

1.1 The system shall provide a registration option for new users.
1.2 The user shall be able to enter the required personal information to create an account.
1.3 The system shall not allow registration if required information is missing.

Priority Level: High
Precondition: The registration page is accessible.

2. User Login

Functional Requirements

2.1 The system shall allow a registered user to log in using valid account information.
2.2 The system shall reject incorrect or incomplete login information.
2.3 After successful login, the user shall be able to access the main system functions.

Priority Level: High
Precondition: The user already has a registered account.

3. Academic Information Input

Functional Requirements

3.1 The system shall allow students to enter their SSC and HSC results.
3.2 The system shall collect the required academic information before starting university

matching.
3.3 The system shall prevent invalid academic information from being submitted.

Priority Level: High
Precondition: The user can access the academic information input section.

4. University Eligibility Matching

Functional Requirements

4.1 The system shall use the student's SSC and HSC results to identify suitable universities.
4.2 The system shall show a list of universities that match the student's eligibility.
4.3 The user shall be able to select a university from the matched result.

Priority Level: High
Precondition: The student has entered the required SSC and HSC information.

The matching of SSC/HSC results with university admission criteria is one of the main purposes of Admission Tracker.

5. University Profile

Functional Requirements

5.1 The system shall allow users to open the profile of a selected university.
5.2 The university profile shall show available information about the university.
5.3 The user shall be able to review the university information before making a decision.

Priority Level: High
Precondition: A university has been selected from the available list.

6. University Comparison

Functional Requirements

6.1 The system shall allow users to select universities for comparison.
6.2 The system shall display the selected universities together so that their available information can be compared.
6.3 The comparison feature shall help the user review the differences between the selected universities.

Priority Level: Medium
Precondition: At least two universities are available for comparison.

7. Student Feedback and Rating

Functional Requirements

7.1 The system shall provide a section for student feedback.
7.2 The user shall be able to view available feedback related to a university.
7.3 The system shall provide a rating option for universities.

Priority Level: Medium
Precondition: The user can access a university profile.

The original project scope includes both student feedback and a rating interface.

8. Bookmark

Functional Requirements

8.1 The system shall allow logged-in users to bookmark a preferred university.
8.2 Bookmarked universities shall be available from the user's bookmark section.
8.3 The user shall be able to review saved universities later.

Priority Level: Medium
Precondition: The user is logged in and a university is available to save.

9. Notifications and Updates

Functional Requirements

9.1 The system shall provide a notification section for the user.
9.2 The user shall be able to view available admission-related updates and notifications.
9.3 Notifications shall help users keep track of important admission information.

Priority Level: Medium
Precondition: The user is logged in.

10. User Profile and Settings

Functional Requirements

10.1 The system shall provide a profile section for registered users.
10.2 The user shall be able to view personal profile information.
10.3 The system shall provide settings options for managing available user preferences.

Priority Level: Medium
Precondition: The user is logged in.

11. University Preparation Books

Functional Requirements

11.1 The system shall provide information about university preparation books.
11.2 The user shall be able to browse available books.
11.3 The user shall be able to select a book for the purchase process.

Priority Level: Medium
Precondition: Preparation books are available in the system.

The project scope includes a user flow for purchasing books for university preparation.

12. Payment for Books

Functional Requirements

12.1 The system shall provide a payment step for a selected preparation book.
12.2 The user shall be able to enter the required payment information.
12.3 The system shall allow the user to continue through the planned purchase flow after providing the required information.

Priority Level: High
Precondition: The user has selected a preparation book.

13. University Application

Functional Requirements

13.1 The system shall provide an option for students to start the university application process.
13.2 The user shall be able to select an eligible university before continuing to the application flow.
13.3 The system shall guide the user to the next step of the planned application process.

Priority Level: High
Precondition: The student has selected an eligible university.

These features are based on the core functions listed for Admission Tracker, including registration/login, eligibility matching, university profiles, comparison, notifications, bookmarks, books, payment, and university application.

4.2 System Quality Attributes

Performance:
The main pages of Admission Tracker, such as Home, Dashboard, and Search Results, should load

within 5 seconds under normal network conditions. The university eligibility matching process should also return results within 5 seconds for normal searches. The planned system should be able to support around 500 concurrent users during busy admission periods.

Reliability:
The system should remain stable during normal use, especially during admission seasons. It is expected to maintain about 99.5% availability during important admission periods. Unexpected errors should be handled properly, and important system errors should be recorded for future checking.

Integrity and Security:
Personal information, SSC/HSC results, and payment-related information should be kept secure. Users should access the system through proper authentication, and they should only be able to view or update their own profile information. Important activities such as payment and profile editing should include proper validation.

Usability:
Admission Tracker should be simple and easy to understand for students. The interface should work properly on desktop, tablet, and mobile devices. Menus, buttons, and instructions should be clear so that a new user can register and search for a university without special training.

Maintainability:
The system should be organized in a way that makes future changes and updates easier. Project files and documentation should be properly maintained so that new features or fixes can be added without creating unnecessary problems in existing parts of the system.

Scalability:
The system should be able to handle a larger number of students and university records in the future. Its design should also allow new features, such as advanced recommendations or analytics, to be added later without requiring a complete redesign.

Compatibility:
The main Admission Tracker functions should remain usable on commonly used modern web browsers and supported devices without major display or functional problems.

Testability:
Each important function of the system should have at least one planned test case with clear test steps, test data, and expected results.

Responsiveness:
The interface should remain clear and properly arranged on desktop, tablet, and mobile screen sizes so that students can use the main features comfortably.

4.3 System Interface

The Admission Tracker provides a simple and organized interface so that users can move through the main features easily. The important system interfaces are described below.

Home Page:
The home page introduces the Admission Tracker system and gives users access to the main options of the system.

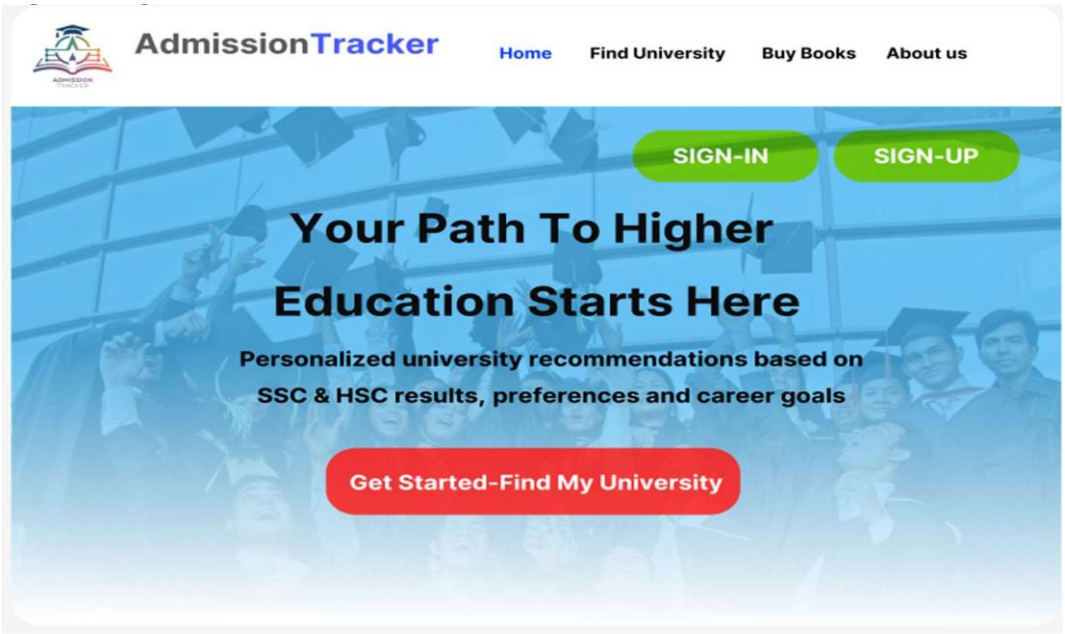

Fig 1: Admission Tracker Homepage

User Registration Page:
This page allows new users to create an account by providing the required personal information.

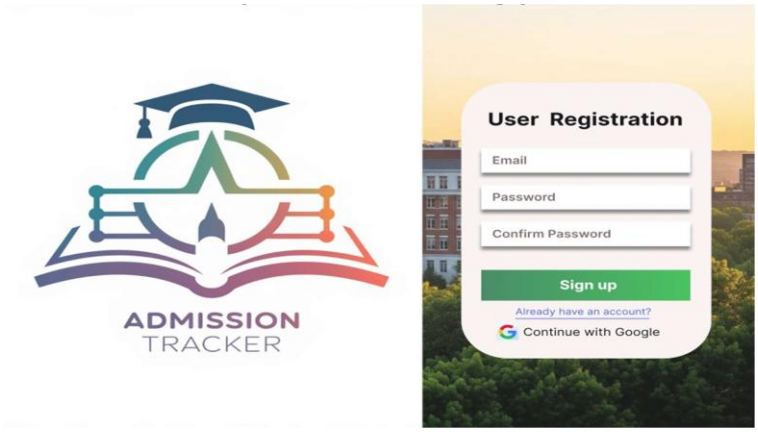

Fig 2: User Registration Page

User Login Page:
Registered users can enter their login information to access their account and dashboard.

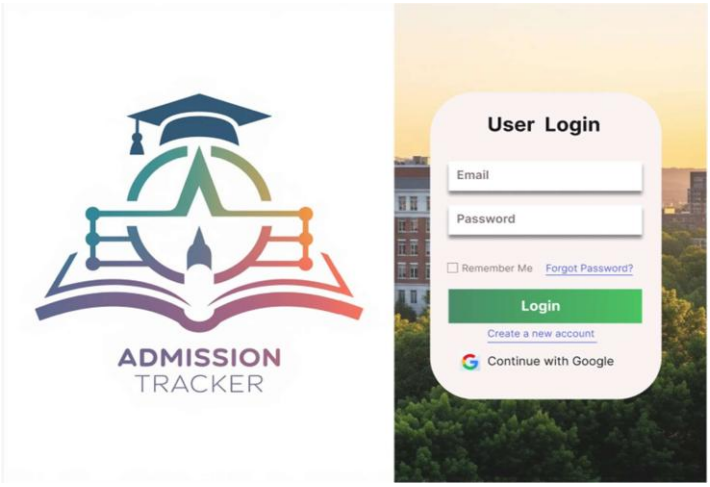

Fig 3: User Login Page

User Dashboard:

The dashboard gives users access to the main features such as university search, matched universities, bookmarks, notifications, profile, and settings.

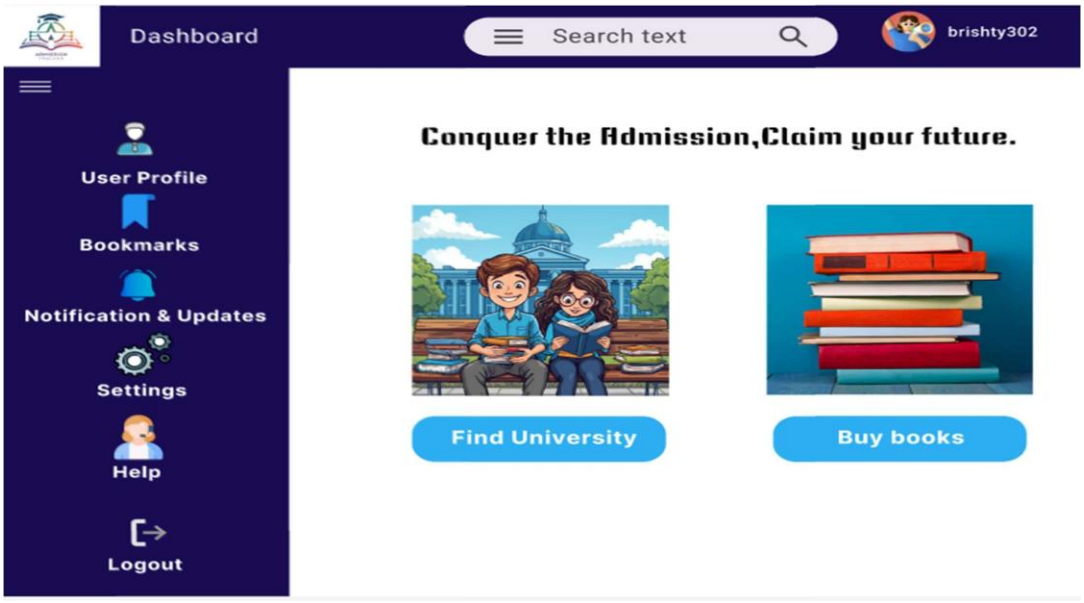

Fig 4: User Dashboard

University Search Interface:

This interface allows students to enter their academic information and search for suitable universities.

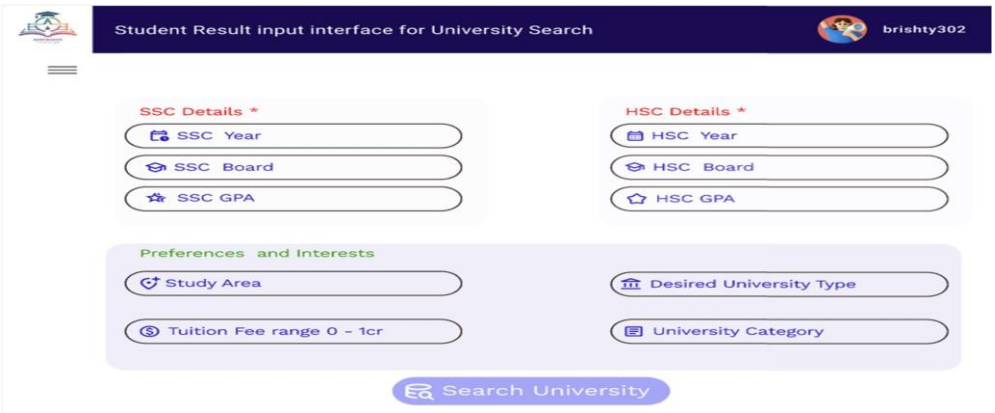

Fig 5: University Search Interface

Matched University Interface:

The system displays universities that match the student's academic results and eligibility requirements.

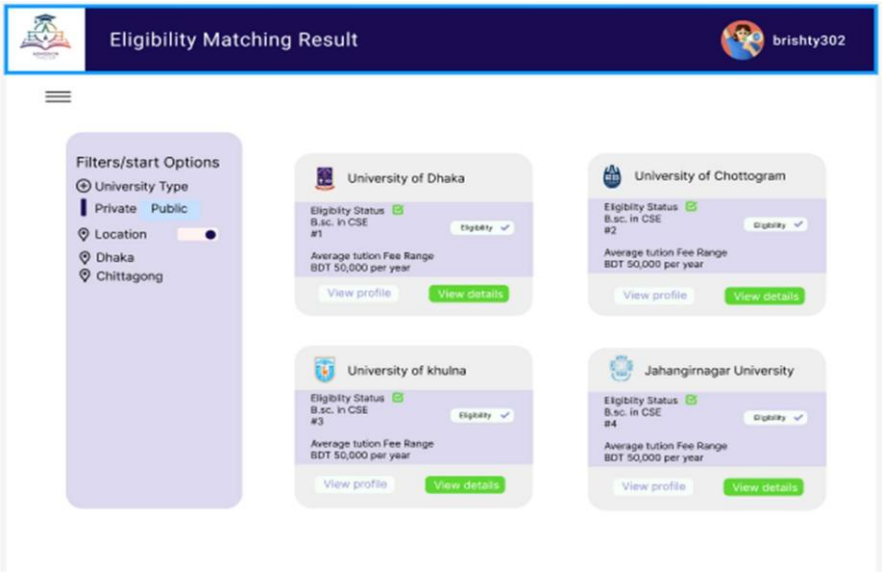

Fig 6: Matched University Interface

University Profile:

This page shows detailed information about a selected university, including programs, admission information, tuition fees, and other useful details.

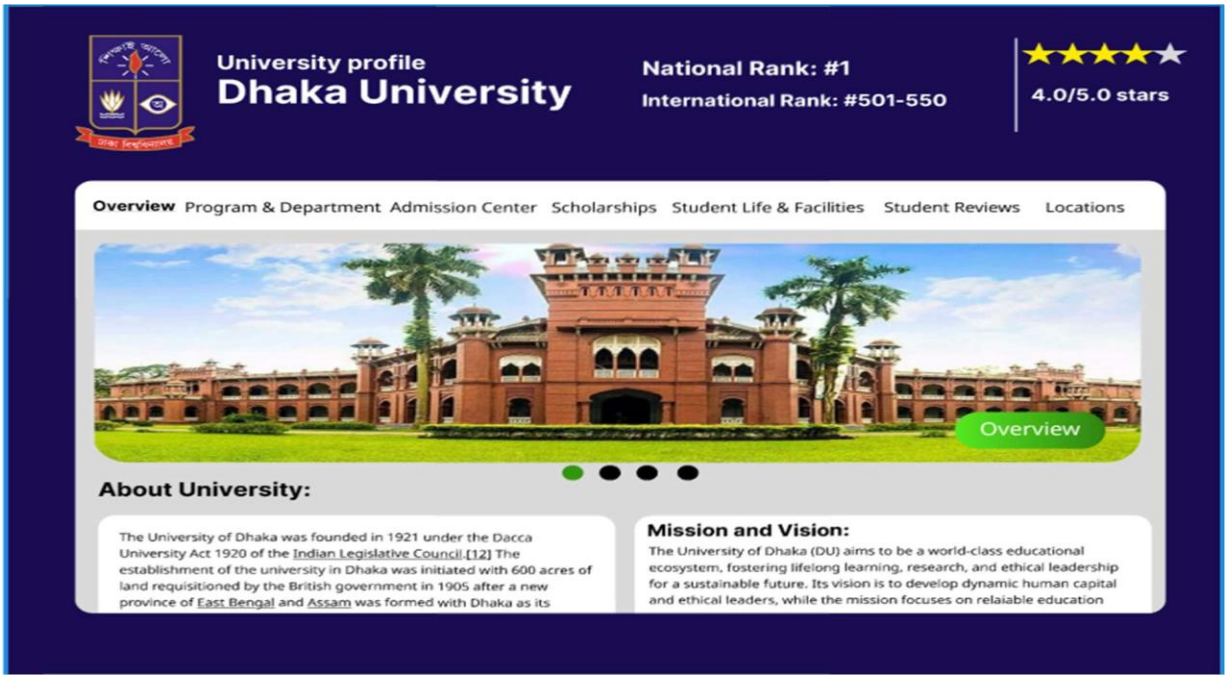

Fig 7: A University Profile

University Comparison:
Users can compare selected universities to understand their differences and choose a suitable option.

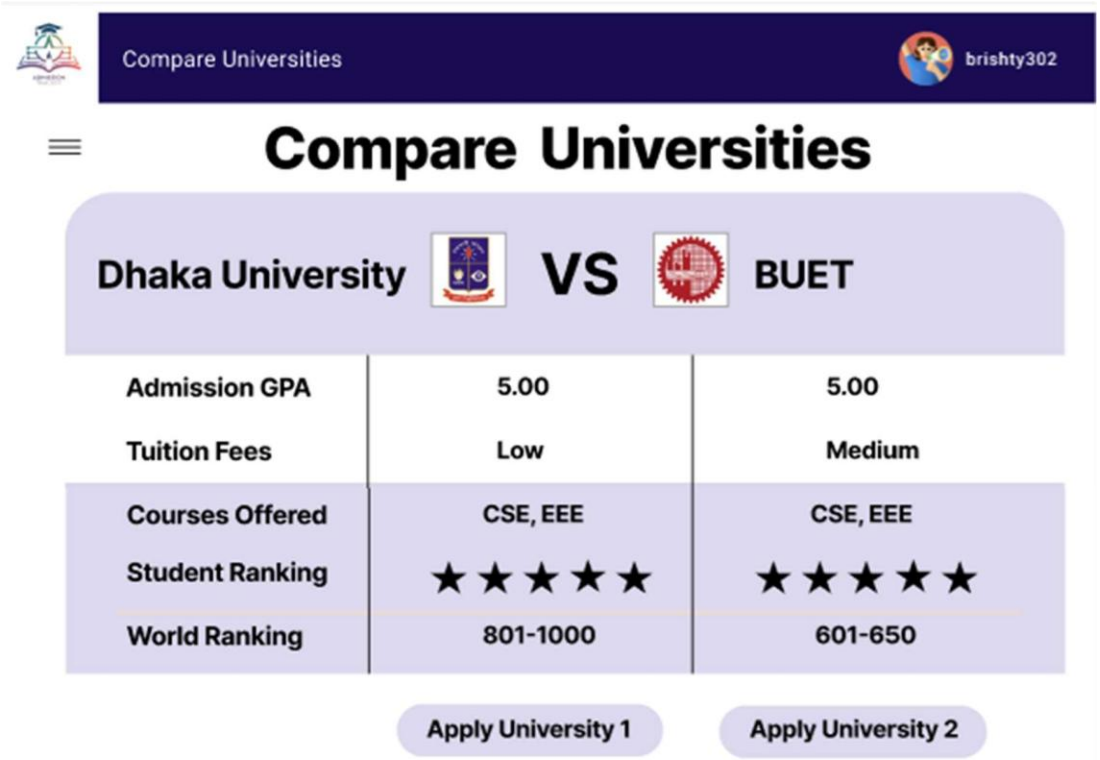

Fig 8: Comparing university

Books for University Preparation:
This page displays preparation books that students can view and select for purchase.

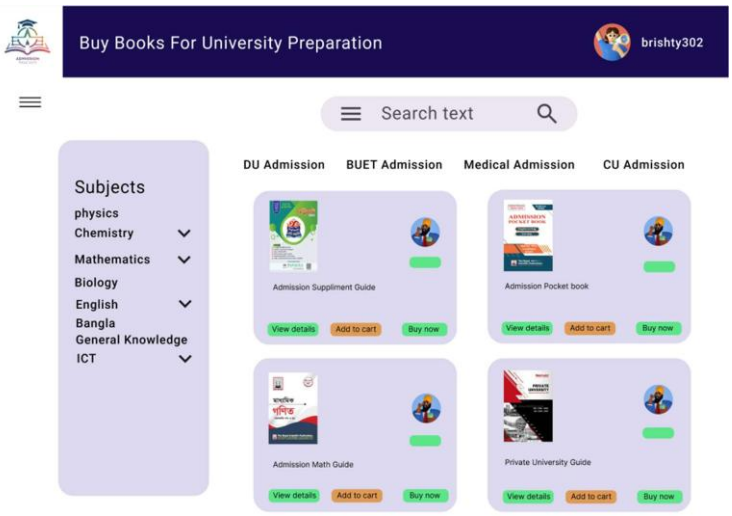

Fig 9: Books For University Preparation

Payment Interface:
The payment page allows users to enter the required payment details for purchasing selected books.

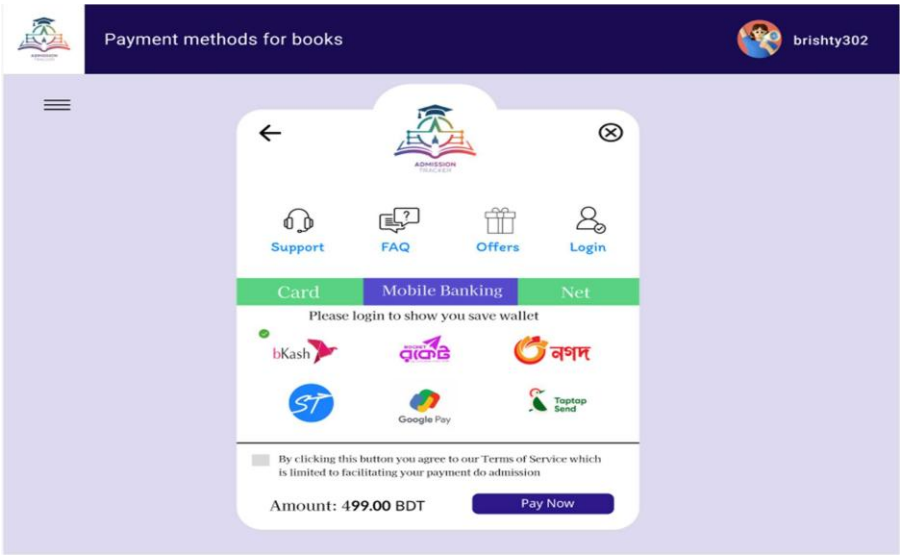

Fig 10: Payment for books

Bookmarks:
Users can view universities that they have previously saved for future reference.

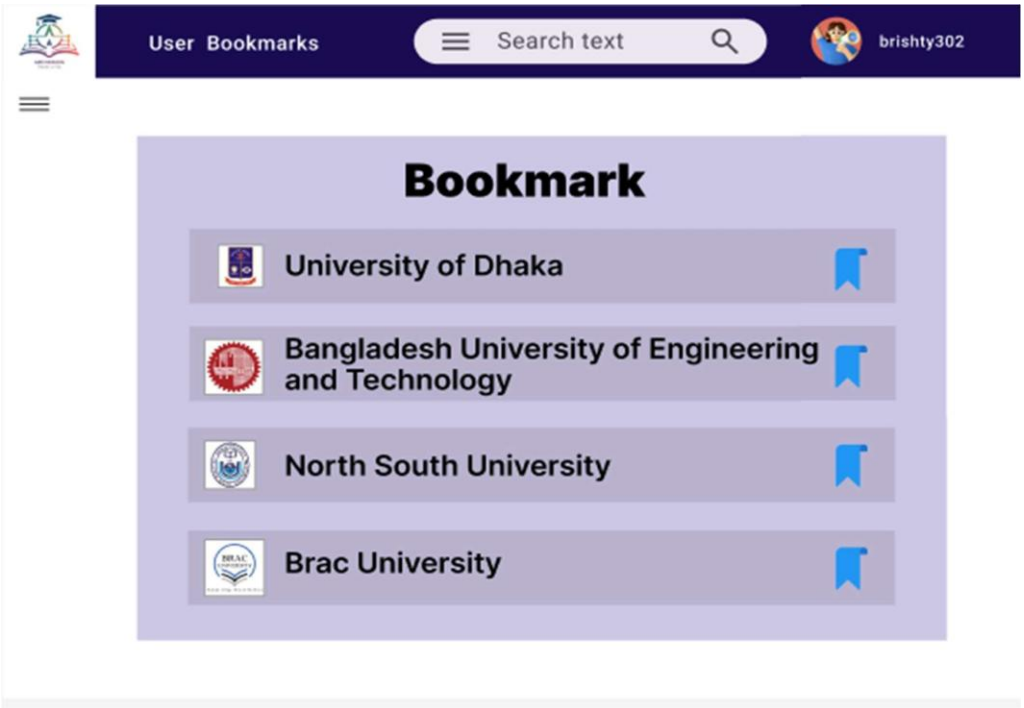

Fig 11: User Bookmarks

Notifications:
This section displays admission-related updates and notifications for the user.

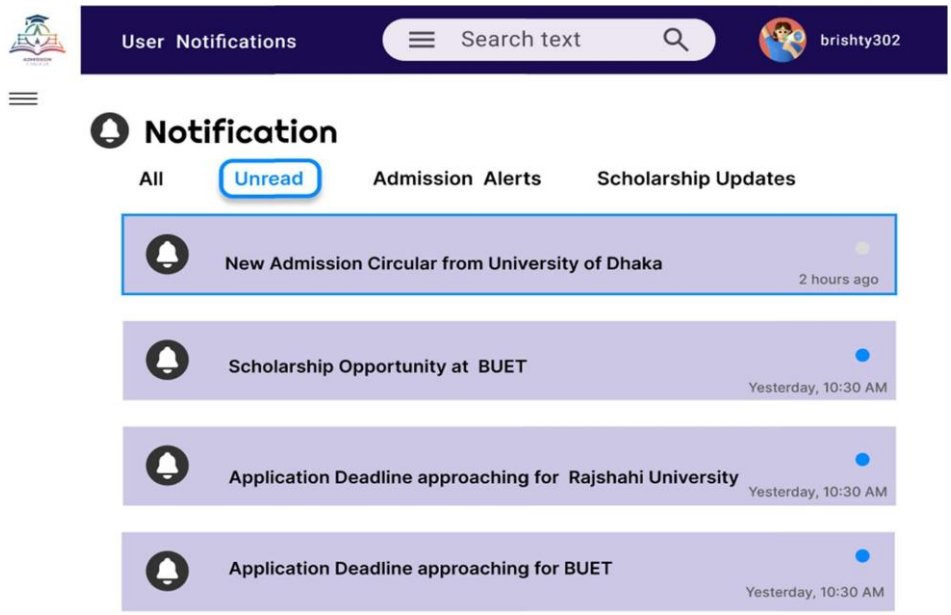

Fig 12: Users Notifications

User Settings:
The settings page allows users to manage available account and system preferences.

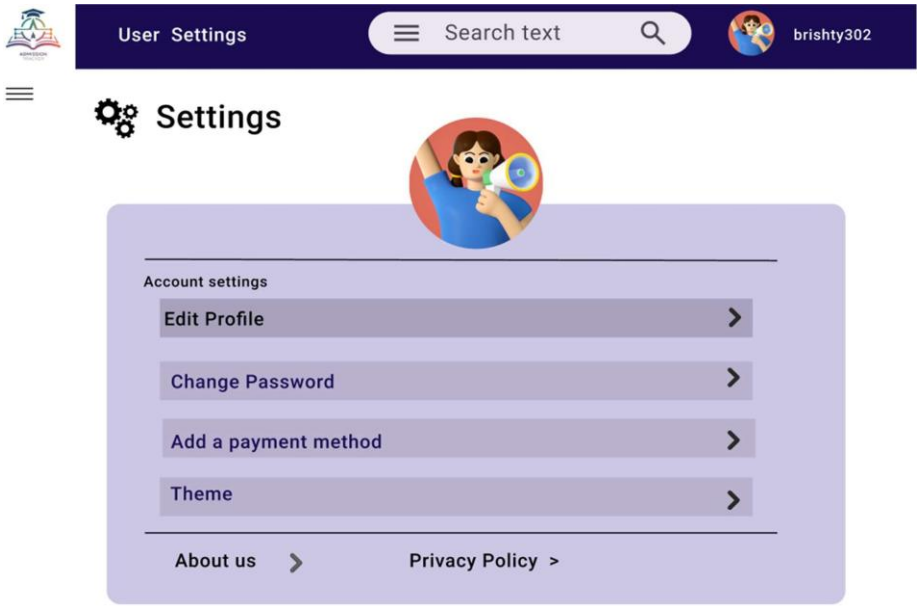

Fig 13: User Settings

User Profile:
The profile page displays the user's personal and academic information.

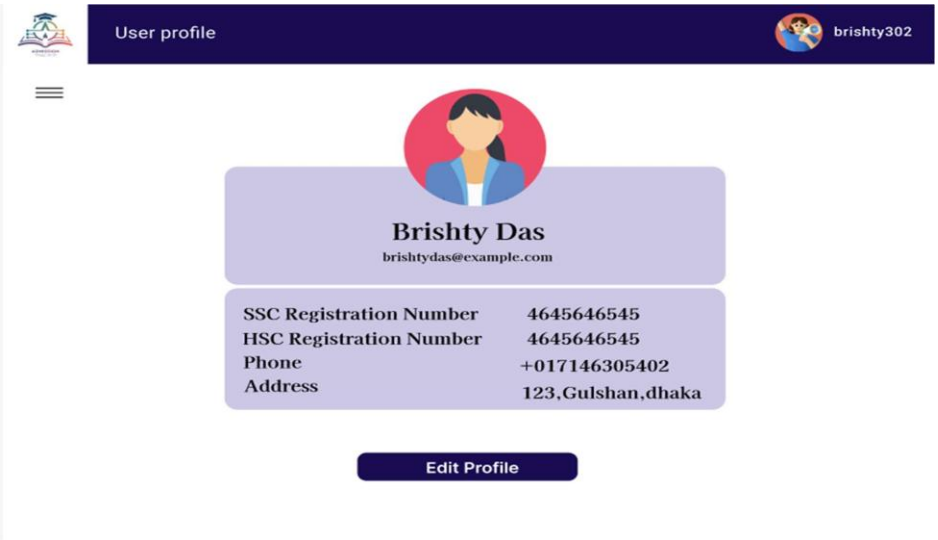

Fig 14: User Profile

About Page:
This page provides basic information about the Admission Tracker system and its purpose.

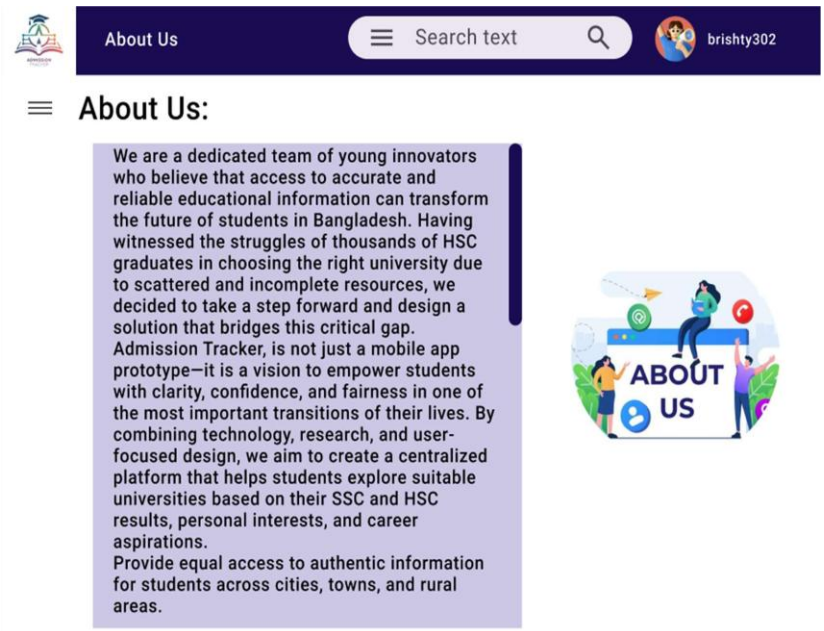

Fig 15: About Admission Tracker

Privacy Policy Page:
The privacy policy page provides information about how user information and system data should be handled.

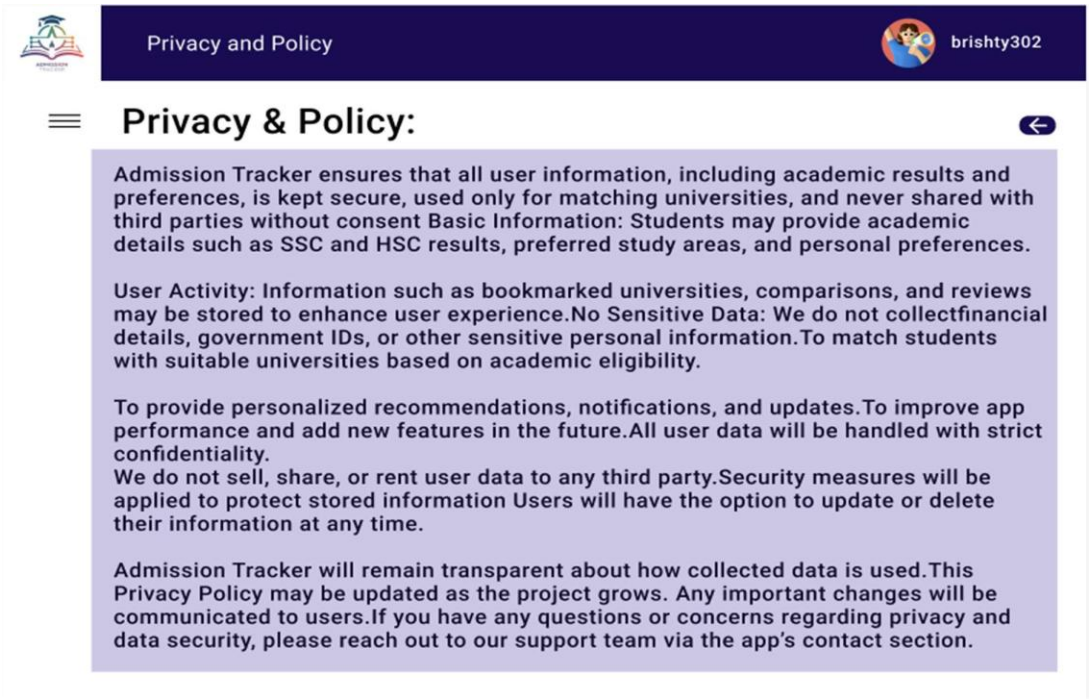

Fig 16: Privacy and Policy By Admission Tracker

The project contains these major user-interface screens, including the homepage, registration, login, dashboard, university search, matched university results, profiles, comparison, books, payment, bookmarks, notifications, settings, profile, About, and Privacy Policy pages.

4.4 Project Requirements

Admission Tracker has some important project requirements related to development time, budget, resources, working environment, and technology. These requirements help to keep the project properly planned and manageable.

Time Estimation

Admission Tracker is a web-based university guidance system that includes user registration, login, academic information input, university eligibility matching, university profiles, comparison, feedback, bookmarks, notifications, preparation books, payment, and university application features.

The COCOMO model is used to estimate the required effort and development time.

- **Estimated SLOC:** 50,000 lines
- **Project Mode:** Organic

- **Coefficient:** 2.4
- **Project Complexity:** 1.12

Effort Calculation:

PM = 2.4 × (50,000 / 1000)^1.12

PM ≈ 140.57 person-months

Development Time:

DM = 2.5 × (140.57)^0.38

DM ≈ 10 months

Estimated Team Size:

Team Size = 140.57 / 10 ≈ 14 people

Therefore, the estimated development time for the complete Admission Tracker system is around **10 months**, with an estimated team size of approximately **14 people**.

Budget Estimation

The estimated budget for Admission Tracker is prepared by considering the cost of development activities, testing, internet and device usage, project-supporting tools, documentation, and other possible expenses.

Category	**Estimated Cost (BDT)**
System Design and Development Activities	20,000
QA and Testing Activities	10,000
Internet, Electricity, and Device Usage	5,000
Project Management and Supporting Tools	3,000
Documentation and Report Preparation	4,000
Miscellaneous and Contingency	3,000
Total Estimated Budget	**45,000 BDT**

Therefore, the total estimated budget for the Admission Tracker project is **45,000 BDT**.

Resources

- **Human Resources:** People responsible for requirement analysis, system design, project planning, testing, and documentation.
- **Hardware:** A standard laptop or desktop computer with a stable internet connection.
- **Project Management Tool:** Trello is used to organize project activities and monitor progress.

- **Version Control:** Git and GitHub are used to maintain project files and track changes.
- **Documentation Resources:** Required documents and tools are used to prepare requirements, diagrams, test cases, and the final report.
- **Browser:** A modern web browser is required to review the web-based system interface.

Environment

- **Project Environment:** The project is prepared in a normal computer-based environment with a stable internet connection.
- **Design Environment:** The project includes the web application interface and complete user flow of Admission Tracker.
- **Testing Environment:** The system functions and user flows will be checked according to the prepared test cases.
- **Documentation Environment:** Requirements, test cases, schedules, diagrams, and other SQT documents will be maintained throughout the project.

The present Admission Tracker project focuses mainly on the designed web application flow and does not include full backend or database implementation.

Technology Constraints

- Admission Tracker is designed as a **web-based system**.
- The interface should work properly on desktop, tablet, and mobile devices.
- The system should support commonly used modern web browsers.
- Git and GitHub are used for version control.
- Trello is used for project planning and task management.
- The current project does not include a complete backend and database implementation.
- Real payment-gateway processing is not included in the current project.
- The system should be flexible enough to support additional features and further development in the future.

5. FEATURES NOT TO BE TESTED

The current testing scope of Admission Tracker does not include some areas because the project mainly focuses on the designed web application interface and user flow. Full backend development, database implementation, and real system integration are not included in the present project scope.

Backend and Database Operations

The testing process will not cover actual backend processing, database queries, data storage, or database optimization because a complete backend and database are not implemented in the current Admission Tracker project.

Real Payment Gateway Processing

The book payment flow can be checked from the user interface, but actual payment transactions, bank authorization, payment settlement, and refund processing will not be tested.

Admin Panel Functions

Admin-side activities are not included in the current testing scope because the available project mainly focuses on student-side features and user flows.

Production-Scale Load and Stress Testing

Large-scale load testing, stress testing, and server-capacity testing will not be performed because the current project is not deployed as a complete production system.

Advanced Security Testing

Advanced security activities such as penetration testing, vulnerability scanning, and detailed server-side security testing are outside the current testing scope. Basic security-related requirements can still be considered while preparing the test cases.

Operating-System and Hardware Failure Recovery

The project will not test situations such as device failure, power failure, disk failure, or operating-system recovery because these areas are outside the main functional scope of Admission Tracker.

6. TESTING APPROACH

The testing approach for Admission Tracker is prepared to check whether the main student-side functions and user flows work according to the defined requirements. The current project mainly focuses on the web interface and user flow, so the testing process will mainly use manual functional checking of the available features.

The main areas include registration, login, SSC/HSC information input, university eligibility matching, university profiles, comparison, bookmarks, notifications, preparation books, payment

flow, university application, and profile settings. These are the core functions defined in the Admission Tracker project scope.

6.1 Testing Levels

Unit Testing

Unit testing normally checks individual functions or components separately.

For Admission Tracker, detailed code-level unit testing is not included in the current project because full coding, backend development, and database implementation are outside the present scope. If the system is fully developed later, unit testing can be performed for individual functions such as:

- Registration field validation
- Login validation
- SSC/HSC input validation
- Eligibility matching logic
- Bookmark functions
- Profile update validation
- Payment information validation

The current project scope confirms that full coding and backend implementation are not included.

Integration Testing

Integration testing checks whether related parts of the system work properly together.

For Admission Tracker, the following connected user flows can be checked:

- Registration followed by login
- Academic information input followed by eligibility matching
- Matched university list followed by university profile
- University selection followed by comparison
- University profile followed by bookmark
- Book selection followed by payment flow
- Eligible university selection followed by application flow
- User profile followed by settings

The main purpose is to check that users can move correctly from one related feature to another.

System Testing

System testing checks the overall Admission Tracker system as a complete user flow.

The planned system-level checking includes:

- User registration and login
- SSC and HSC information input
- University search and eligibility results
- University profile viewing
- University comparison
- Feedback and rating
- Bookmark management
- Notifications and updates
- Preparation book selection
- Payment flow
- University application flow
- Profile and settings

System testing will focus mainly on whether the complete student-side flow behaves according to the expected requirements.

Acceptance Testing

Acceptance testing checks whether Admission Tracker meets the needs of its intended users.

Representative student activities can be used for acceptance checking, such as:

- A student creating an account and logging in
- A student entering SSC and HSC results
- A student finding suitable universities
- A student viewing and comparing university information
- A student saving a preferred university
- A student checking admission notifications

- A student selecting a preparation book
- A student moving through the payment and application flow

The system will be considered acceptable when the important user requirements and high-priority functions meet the defined acceptance criteria.

This follows the same Unit → Integration → System → Acceptance testing structure used in the reference report.

6.2 Test Tools

Admission Tracker mainly uses simple tools to support manual testing, project organization, and documentation.

- **Web Browser:** Used to open and review the available Admission Tracker interfaces and user flows.
- **Manual Test Cases:** Used to check each important function using defined test steps, test data, expected results, and status.
- **Trello:** Used to organize project tasks and monitor progress.
- **Git and GitHub:** Used to maintain project files and track project changes.
- **Screenshots:** Used as supporting evidence for system interfaces and testing-related documentation.
- **Documentation Tools:** Used to prepare the test plan, test cases, reports, and other SQT documents.

Automated tools such as Selenium or Pytest are not included because they are not part of the current Admission Tracker project implementation.

6.3 Meetings

Regular review meetings will help keep the testing and documentation work organized.

- **Weekly Progress Review:** Project progress, prepared test cases, and remaining work will be reviewed once every week.
- **Project Review Meeting:** Important requirements, interface changes, and testing-related issues will be discussed when needed.
- **Issue Review Meeting:** An additional discussion can be arranged if an important problem or major change is identified.
- **Final Review Meeting:** Before submission, the complete test plan, test cases, results, and report will be checked together.

- **Communication:** Online communication tools can be used when discussion or feedback is required.

7. TEST CASES / TEST ITEMS

Test Case 01

Project Name: Admission Tracker – A Personalized University Finder for Bangladeshi Students			**Test Designed by:** Brishty Das	
Test Case ID: TC-01			**Test Designed date:** 19 August 2026	
Test Priority (Low, Medium, High): Medium			**Test Executed by:** Brishty Das	
Module Name: User Registration			**Test Execution date:** 03 September 2026	
Test Title: Register with valid information				
Description: Check whether a new user can register with valid information.				
Precondition (If any): The user does not already have an account.				
Test Steps	**Test Data**	**Expected Results**	**Actual Results**	**Status**
1. Open the registration page.2. Enter valid information.3. Click Register.	Valid name, email and password	The account should be created successfully.	Account created successfully.	**Pass**
Post Condition: A new user account is created.				

Test Case 02

Project Name: Admission Tracker – A Personalized University Finder for Bangladeshi Students			**Test Designed by:** Brishty Das	
Test Case ID: TC-02			**Test Designed date:** 19 August 2026	
Test Priority (Low, Medium, High): Medium			**Test Executed by:** Brishty Das	
Module Name: User Registration			**Test Execution date:** 03 September 2026	
Test Title: Prevent duplicate registration				
Description: Check whether the system prevents registration with an email that already exists.				
Precondition (If any): An account already exists with the same email address.				
Test Steps	**Test Data**	**Expected Results**	**Actual Results**	**Status**
1. Open the registration page.2. Enter an existing email with valid information.3. Click Register.	Existing email address	The system should show that the email already exists and should not create another account.	The system allowed duplicate registration.	**Fail**
Post Condition: A duplicate account should not be created.				

Test Case 03

Project Name: Admission Tracker – A Personalized University Finder for Bangladeshi Students			**Test Designed by:** Brishty Das	
Test Case ID: TC-03			**Test Designed date:** 19 August 2026	
Test Priority (Low, Medium, High): Medium			**Test Executed by:** Brishty Das	
Module Name: User Login		**Test Execution date:** 03 September 2026		
Test Title: Login with valid credentials				
Description: Check whether a registered user can log in with correct information.				
Precondition (If any): A registered user account exists.				
Test Steps	**Test Data**	**Expected Results**	**Actual Results**	**Status**
1. Open the login page.2. Enter valid email and password.3. Click Login.	Valid registered email and password	The user should log in and reach the dashboard.	User logged in successfully.	**Pass**
Post Condition: The user has an active login session.				

Test Case 04

Project Name: Admission Tracker – A Personalized University Finder for Bangladeshi Students			**Test Designed by:** Brishty Das	
Test Case ID: TC-04			**Test Designed date:** 19 August 2026	
Test Priority (Low, Medium, High): Medium			**Test Executed by:** Brishty Das	
Module Name: User Login			**Test Execution date:** 03 September 2026	
Test Title: Login with an incorrect password				
Description: Check whether the system rejects login when the password is incorrect.				
Precondition (If any): A registered user account exists.				
Test Steps	**Test Data**	**Expected Results**	**Actual Results**	**Status**
1. Open the login page.2. Enter a valid email and wrong password.3. Click Login.	Valid email and wrong password	The system should reject the login and show an invalid login message.	The system redirected the user to the dashboard.	**Fail**
Post Condition: The user should remain logged out.				

Test Case 05

Project Name: Admission Tracker – A Personalized University Finder for Bangladeshi Students			**Test Designed by:** Brishty Das	
Test Case ID: TC-05			**Test Designed date:** 20 August 2026	
Test Priority (Low, Medium, High): High			**Test Executed by:** Brishty Das	
Module Name: Academic Information			**Test Execution date:** 04 September 2026	
Test Title: Enter valid GPA information				
Description: Check whether valid SSC and HSC GPA values are accepted.				
Precondition (If any): The user is logged in.				
Test Steps	**Test Data**	**Expected Results**	**Actual Results**	**Status**
1. Open the GPA input page.2. Enter valid SSC and HSC GPA.3. Submit.	SSC: 5.00HSC: 5.00	The system should accept the GPA values.	The system accepted the GPA values.	**Pass**
Post Condition: The academic information is ready for eligibility checking.				

Test Case 06

Project Name: Admission Tracker – A Personalized University Finder for Bangladeshi Students			**Test Designed by:** Brishty Das	
Test Case ID: TC-06			**Test Designed date:** 20 August 2026	
Test Priority (Low, Medium, High): High			**Test Executed by:** Brishty Das	
Module Name: Academic Information			**Test Execution date:** 04 September 2026	
Test Title: Reject invalid GPA				
Description: Check whether the system detects an invalid GPA value.				
Precondition (If any): The user is logged in.				
Test Steps	**Test Data**	**Expected Results**	**Actual Results**	**Status**
1. Open the GPA input page.2. Enter an invalid GPA.3. Submit.	Invalid GPA value	The system should show an invalid GPA message.	The system accepted the invalid GPA.	**Fail**
Post Condition: Invalid GPA information should not be accepted.				

Test Case 07

Project Name: Admission Tracker – A Personalized University Finder for Bangladeshi Students	**Test Designed by:** Brishty Das

Test Case ID: TC-07			**Test Designed date:** 20 August 2026	
Test Priority (Low, Medium, High): High			**Test Executed by:** Brishty Das	
Module Name: Eligibility Check			**Test Execution date:** 04 September 2026	
Test Title: Check when no university is eligible				
Description: Check the result when the student's GPA does not meet university requirements.				
Precondition (If any): Academic information has been entered.				
Test Steps	**Test Data**	**Expected Results**	**Actual Results**	**Status**
1. Enter low SSC and HSC GPA.2. Click Search.	SSC: 2.00HSC: 2.00	The system should show that no suitable university is available.	An error page or no clear information was shown.	**Fail**
Post Condition: The user should receive a clear eligibility result.				

Test Case 08

Project Name: Admission Tracker – A Personalized University Finder for Bangladeshi Students			**Test Designed by:** Brishty Das	
Test Case ID: TC-08			**Test Designed date:** 20 August 2026	
Test Priority (Low, Medium, High): High			**Test Executed by:** Brishty Das	
Module Name: Eligibility Check			**Test Execution date:** 04 September 2026	
Test Title: Display eligible universities				
Description: Check whether eligible universities are shown for valid GPA information.				
Precondition (If any): Valid academic information has been entered.				
Test Steps	**Test Data**	**Expected Results**	**Actual Results**	**Status**
1. Enter valid SSC and HSC GPA.2. Click Search.	SSC: 5.00HSC: 5.00	The system should display eligible universities.	A list of eligible universities was displayed.	**Pass**
Post Condition: The matched university list is available.				

Test Case 09

Project Name: Admission Tracker – A Personalized University Finder for Bangladeshi Students	**Test Designed by:** Brishty Das
Test Case ID: TC-09	**Test Designed date:** 21 August 2026
Test Priority (Low, Medium, High): Medium	**Test Executed by:** Brishty Das
Module Name: University Profile	**Test Execution date:** 05 September 2026
Test Title: Open university profile	

Description: Check whether a selected university profile opens correctly.				
Precondition (If any): A university is available in the result list.				
Test Steps	**Test Data**	**Expected Results**	**Actual Results**	**Status**
1. Select a university.2. Open the university profile.	University: Dhaka University	The university profile should open with available details.	The university profile opened successfully.	**Pass**
Post Condition: The selected university information is visible.				

Test Case 10

Project Name: Admission Tracker – A Personalized University Finder for Bangladeshi Students			**Test Designed by:** Brishty Das	
Test Case ID: TC-10			**Test Designed date:** 21 August 2026	
Test Priority (Low, Medium, High): Medium			**Test Executed by:** Brishty Das	
Module Name: Feedback			**Test Execution date:** 05 September 2026	
Test Title: Submit university feedback				
Description: Check whether a user can submit feedback for a university.				
Precondition (If any): The user is logged in and a university profile is open.				
Test Steps	**Test Data**	**Expected Results**	**Actual Results**	**Status**
1. Open the feedback section.2. Enter feedback and rating.3. Submit.	Feedback: Great environmentRating: 5	The system should save the feedback.	Feedback was not saved.	**Fail**
Post Condition: Successfully submitted feedback should be stored.				

Test Case 11

Project Name: Admission Tracker – A Personalized University Finder for Bangladeshi Students			**Test Designed by:** Brishty Das	
Test Case ID: TC-11			**Test Designed date:** 21 August 2026	
Test Priority (Low, Medium, High): Low			**Test Executed by:** Brishty Das	
Module Name: Feedback			**Test Execution date:** 05 September 2026	
Test Title: Prevent empty feedback submission				
Description: Check whether the system prevents empty feedback.				
Precondition (If any): The user is logged in and can access the feedback section.				
Test Steps	**Test Data**	**Expected Results**	**Actual Results**	**Status**

1. Open the feedback section.2. Leave the feedback field empty.3. Click Submit.	Feedback: BlankRating: 4	The system should show that feedback is required.	The system showed the validation message correctly.	**Pass**
Post Condition: Empty feedback is not submitted.				

Test Case 12

Project Name: Admission Tracker – A Personalized University Finder for Bangladeshi Students			**Test Designed by:** Brishty Das	
Test Case ID: TC-12			**Test Designed date:** 21 August 2026	
Test Priority (Low, Medium, High): Medium			**Test Executed by:** Brishty Das	
Module Name: University Comparison			**Test Execution date:** 05 September 2026	
Test Title: Compare two universities				
Description: Check whether two universities can be compared correctly.				
Precondition (If any): At least two universities are available.				
Test Steps	**Test Data**	**Expected Results**	**Actual Results**	**Status**
1. Select two universities.2. Click Compare.	DU and BUET	The system should display a comparison table.	The comparison table was displayed.	**Pass**
Post Condition: The user can review the selected universities together.				

Test Case 13

Project Name: Admission Tracker – A Personalized University Finder for Bangladeshi Students			**Test Designed by:** Brishty Das	
Test Case ID: TC-13			**Test Designed date:** 22 August 2026	
Test Priority (Low, Medium, High): Medium			**Test Executed by:** Brishty Das	
Module Name: University Comparison			**Test Execution date:** 06 September 2026	
Test Title: Compare more than three universities				
Description: Check how the system responds when more than the allowed number of universities are selected.				
Precondition (If any): At least four universities are available.				
Test Steps	**Test Data**	**Expected Results**	**Actual Results**	**Status**

1. Select four universities.2. Click Compare.	DU, BUET, RUET, KUET	The system should show that a maximum of three universities can be selected.	The system crashed.	**Fail**
Post Condition: The system should remain stable and limit the number of selected universities.				

Test Case 14

Project Name: Admission Tracker – A Personalized University Finder for Bangladeshi Students			**Test Designed by:** Brishty Das	
Test Case ID: TC-14			**Test Designed date:** 22 August 2026	
Test Priority (Low, Medium, High): Low			**Test Executed by:** Brishty Das	
Module Name: Bookmark			**Test Execution date:** 06 September 2026	
Test Title: Add university to bookmarks				
Description: Check whether a user can save a university in the bookmark list.				
Precondition (If any): The user is logged in.				
Test Steps	**Test Data**	**Expected Results**	**Actual Results**	**Status**
1. Select a university.2. Click the Bookmark option.	University: DU	The university should be saved in bookmarks.	The university was saved successfully.	**Pass**
Post Condition: The selected university appears in the bookmark list.				

Test Case 15

Project Name: Admission Tracker – A Personalized University Finder for Bangladeshi Students			**Test Designed by:** Brishty Das	
Test Case ID: TC-15			**Test Designed date:** 22 August 2026	
Test Priority (Low, Medium, High): Low			**Test Executed by:** Brishty Das	
Module Name: Bookmark			**Test Execution date:** 06 September 2026	
Test Title: Remove bookmarked university				
Description: Check whether a saved university can be removed from bookmarks.				
Precondition (If any): A university is already bookmarked.				
Test Steps	**Test Data**	**Expected Results**	**Actual Results**	**Status**
1. Open bookmarks.2. Select the Remove option.	University: DU	The selected university should be removed from bookmarks.	The university still appeared in the list.	**Fail**
Post Condition: The removed university should no longer appear in bookmarks.				

Test Case 16

Project Name: Admission Tracker – A Personalized University Finder for Bangladeshi Students			**Test Designed by:** Brishty Das	
Test Case ID: TC-16			**Test Designed date:** 22 August 2026	
Test Priority (Low, Medium, High): High			**Test Executed by:** Brishty Das	
Module Name: University Application			**Test Execution date:** 06 September 2026	
Test Title: Submit application with complete information				
Description: Check whether an eligible student can submit an application with all required information.				
Precondition (If any): The user is logged in and eligible for the selected university.				
Test Steps	**Test Data**	**Expected Results**	**Actual Results**	**Status**
1. Open the application form.2. Enter all required information.3. Submit.	Valid SSC/HSC and university information	The application should be submitted successfully.	The application was submitted successfully.	**Pass**
Post Condition: The completed application is submitted.				

Test Case 17

Project Name: Admission Tracker – A Personalized University Finder for Bangladeshi Students			**Test Designed by:** Brishty Das	
Test Case ID: TC-17			**Test Designed date:** 23 August 2026	
Test Priority (Low, Medium, High): High			**Test Executed by:** Brishty Das	
Module Name: University Application			**Test Execution date:** 07 September 2026	
Test Title: Submit application with missing information				
Description: Check whether an incomplete application is prevented.				
Precondition (If any): The user is eligible to apply.				
Test Steps	**Test Data**	**Expected Results**	**Actual Results**	**Status**
1. Leave required information empty.2. Click Submit.	HSC information left empty	The system should show that the required information must be entered.	The system accepted the incomplete form.	**Fail**
Post Condition: An incomplete application should not be submitted.				

Test Case 18

Project Name: Admission Tracker – A Personalized University Finder for Bangladeshi Students			**Test Designed by:** Brishty Das	
Test Case ID: TC-18			**Test Designed date:** 23 August 2026	
Test Priority (Low, Medium, High): High			**Test Executed by:** Brishty Das	
Module Name: Book Purchase			**Test Execution date:** 07 September 2026	
Test Title: Complete book purchase				
Description: Check whether a user can complete the book purchase process successfully.				
Precondition (If any): The user is logged in and a book has been selected.				
Test Steps	**Test Data**	**Expected Results**	**Actual Results**	**Status**
1. Select a book.2. Continue to payment.3. Confirm payment.	DU Admission GuidePayment method: bKash	The system should show that the purchase was successful.	Purchase completed successfully.	**Pass**
Post Condition: The book purchase process is completed.				

Test Case 19

Project Name: Admission Tracker – A Personalized University Finder for Bangladeshi Students			**Test Designed by:** Brishty Das	
Test Case ID: TC-19			**Test Designed date:** 23 August 2026	
Test Priority (Low, Medium, High): High			**Test Executed by:** Brishty Das	
Module Name: Book Purchase			**Test Execution date:** 07 September 2026	
Test Title: Handle failed payment				
Description: Check whether the system handles a failed payment correctly.				
Precondition (If any): The user has selected a book and reached the payment step.				
Test Steps	**Test Data**	**Expected Results**	**Actual Results**	**Status**
1. Select a book.2. Continue to payment.3. Attempt a failed payment.	DU Admission GuidePayment method: bKash	The system should show that the payment failed.	Payment failure was handled correctly.	**Pass**
Post Condition: The user is informed that the payment was unsuccessful.				

Test Case 20

Project Name: Admission Tracker – A Personalized University Finder for Bangladeshi Students			**Test Designed by:** Brishty Das	
Test Case ID: TC-20			**Test Designed date:** 23 August 2026	
Test Priority (Low, Medium, High): Medium			**Test Executed by:** Brishty Das	
Module Name: Profile Settings			**Test Execution date:** 07 September 2026	
Test Title: Update phone number				
Description: Check whether a user can update the phone number from the profile.				
Precondition (If any): The user is logged in.				
Test Steps	**Test Data**	**Expected Results**	**Actual Results**	**Status**
1. Open the profile.2. Edit the phone number.3. Click Save.	Phone: 01712345678	The phone number should update successfully.	An error message was shown.	**Fail**
Post Condition: The updated phone number should be saved after a successful update.				

8. ITEM PASS/FAIL CRITERIA

Pass Criteria

A test case will be considered Pass when:

- The actual result matches the expected result.
- Valid information is accepted correctly.
- Invalid or incomplete information is rejected with a proper message.
- The required function works without unexpected errors.
- The user can complete the intended task successfully.
- Information shown by the system is correct and understandable.
- The system remains stable during the normal user flow.

Fail Criteria

A test case will be considered Fail when:

- The actual result does not match the expected result.
- Invalid information is accepted by the system.
- Valid information cannot be submitted properly.

- A required function does not work as expected.
- The system shows incorrect information or an unexpected error.
- Information cannot be saved, updated, removed, or displayed properly.
- The system crashes or stops the user from completing an important task.

Overall Acceptance Threshold

Admission Tracker will be recommended for acceptance when at least 90% of the planned test cases pass, all important high-priority functions work properly, and no major defect remains in the main student workflow.

Since this report contains 20 formal test cases, at least 18 test cases must pass to meet the 90% acceptance level.

Current Test Execution Summary

Measure	Current Result
Total formal test cases	20
Passed	11
Failed	9
Execution completion	100%
Pass rate	55%
Fail rate	45%
Current acceptance decision	Not ready for final acceptance

The current pass rate is 55%, which is below the required 90% acceptance level. Therefore, the failed functions need to be corrected and tested again before the system can be recommended for final acceptance.

The original Admission Tracker testing evidence contains both passed and failed cases across registration, login, GPA checking, eligibility, feedback, comparison, bookmarks, applications, book purchase, and profile settings.

Module-Specific Criteria

Module	Pass Criterion	Fail Criterion
User Registration	Valid information creates an account and duplicate registration is prevented.	Valid registration fails or the same email can create another account.
User Login	Correct credentials allow login and incorrect credentials are rejected.	Valid credentials are rejected or incorrect credentials are accepted.
Academic Information	Valid SSC/HSC GPA values are accepted and invalid GPA values are rejected.	Invalid GPA is accepted or valid academic information cannot be submitted.

Eligibility Matching	Eligible universities are shown correctly and a clear message appears when no university matches.	Incorrect results, an unclear message, or an error page is shown.
University Profile	The selected university profile opens and shows the available information correctly.	The profile does not open or required information is missing.
University Comparison	Selected universities can be compared correctly within the allowed limit.	Comparison fails, too many selections are accepted, or the system crashes.
Feedback	Valid feedback is accepted and empty feedback is prevented.	Valid feedback cannot be saved or an invalid submission is accepted.
Bookmark	A university can be added to and removed from the bookmark list correctly.	Bookmark changes are not reflected properly.
University Application	Complete information allows submission and missing required information is rejected.	A valid application fails or an incomplete application is accepted.
Book Purchase and Payment	The purchase flow works correctly and unsuccessful payment is handled properly.	The system shows the wrong payment result or cannot complete the expected flow.
Profile Settings	Valid profile information can be updated successfully.	Valid information cannot be updated or the new information is not saved.

9. TEST DELIVERABLES

During the Admission Tracker SQT project, the following documents and supporting materials will be prepared:

- A complete Software Test Plan with a unique test plan identifier.
- Requirement specification covering the main functional and non-functional requirements of Admission Tracker.
- Twenty formal test cases with priority, precondition, test steps, test data, expected result, actual result, and final status.
- System interface screenshots for the main Admission Tracker pages and user flows.
- Test execution results showing the Passed and Failed cases.
- Defect or issue records for the test cases that fail during testing.
- A test summary showing the total number of test cases, passed cases, failed cases, pass rate, and final acceptance decision.
- Project schedule and testing-related planning documents.

- Risk and contingency information for possible testing problems.
- A complete SQT project report for final submission.

10. STAFFING AND TRAINING NEEDS

Testing Team

Test Manager / QA Tester (Brishty Das):
Brishty Das will handle the main SQT activities for Admission Tracker. Her work includes preparing the test plan, reviewing the requirements, designing and executing the test cases, recording the actual results and status, identifying failed cases, preparing the testing schedule, and completing the final SQT documentation.

Project Documentation (Brishty Das):
She will also organize the system requirements, interface information, test evidence, screenshots, risks, responsibilities, and other documents required for the final report.

Course Instructor:
The course instructor will review the submitted project, check whether it follows the SQT project guidelines, evaluate the work, and provide academic feedback and approval.

Training Needs

- A clear understanding of the main Admission Tracker functions is required, including registration, login, SSC/HSC input, eligibility matching, university profiles, comparison, feedback, bookmarks, application, book purchase, payment, and profile settings.
- Basic knowledge of manual software testing is needed to prepare and execute test cases correctly.
- The tester should understand how to compare Expected Results with Actual Results and decide whether a test case is Pass or Fail.
- Basic knowledge of defect reporting is required so that failed cases can be described clearly with the problem, expected behavior, actual behavior, and test evidence.
- Basic knowledge of Trello, Git, and GitHub is useful for organizing project activities and maintaining project files.
- Basic security and privacy awareness is also important because the system handles personal information, academic results, login information, and payment-related data.

The Admission Tracker project includes these main student-side functions in its defined scope.

Collaboration and Review

The testing progress will be reviewed regularly during the project. If an important problem is found, the related test case and system requirement will be checked again. Feedback from the course instructor or project members can also be considered when necessary. Before submission, the complete report, test results, tables, screenshots, and formatting will be checked one final time.

11. RESPONSIBILITIES

The responsibility matrix below shows the main responsibilities for the Admission Tracker SQT project. Since Brishty Das is handling the SQT work, the testing and documentation responsibilities are mainly assigned to her. The check mark indicates participation or review responsibility.

Task	Test Manager / Lead	QA / Test Engineer	Development Support	Course Instructor
Requirement and scope review	✓	✓		✓
Test-plan preparation	✓	✓		
Formal test-case design	✓	✓		
Test-data preparation	✓	✓		
Manual test execution	✓	✓		
Test-result recording	✓	✓		
Defect identification and reporting	✓	✓		
Defect correction support			✓	
Regression testing	✓	✓	✓	
Test summary and final report	✓	✓		
Submission and academic evaluation	✓			✓

Test Manager / Lead – Brishty Das
QA / Test Engineer – Brishty Das
Development Support – Admission Tracker project team
Course Instructor – Course Instructor

12. TESTING SCHEDULE

The testing schedule is prepared according to the Admission Tracker testing activities and the final submission date. The testing work starts on 15 August 2026 and continues until the final project

submission on 14 September 2026. The activities are arranged step by step so that requirements, test cases, system testing, re-testing, and final documentation can be completed properly.

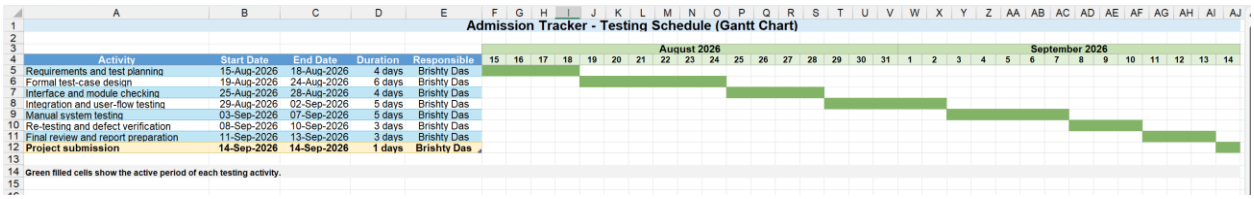

Figure 17. Admission Tracker Testing Schedule (Gantt Chart)

Activity	Start	End	Responsible
Requirements and test planning	15 Aug 2026	18 Aug 2026	Brishty Das
Formal test-case design	19 Aug 2026	24 Aug 2026	Brishty Das
Interface and module checking	25 Aug 2026	28 Aug 2026	Brishty Das
Integration and user-flow testing	29 Aug 2026	02 Sep 2026	Brishty Das
Manual system testing	03 Sep 2026	07 Sep 2026	Brishty Das
Re-testing and defect verification	08 Sep 2026	10 Sep 2026	Brishty Das
Final review and report preparation	11 Sep 2026	13 Sep 2026	Brishty Das
Project submission	14 Sep 2026	14 Sep 2026	Brishty Das

The schedule begins with requirement review and test planning. After that, the formal test cases are prepared and the main interfaces and modules are checked. Integration and user-flow testing are then performed, followed by full manual system testing. Failed or problematic test cases are checked again during the re-testing period. The final report is reviewed and completed before the project submission on 14 September 2026.

13. PLANNING RISKS AND CONTINGENCIES

While planning the testing activities for Admission Tracker, several possible risks were identified that may affect the testing schedule, test quality, or final report preparation. For each risk, a practical action is planned to reduce the problem.

Risk 1: Limited Time for Testing

Probability: 55%
Impact: High

Description: Academic classes, assignments, examinations, and other project work may reduce the available time for completing all planned testing activities.

Mitigation and Contingency: High-priority test cases will be completed first. Progress will be checked regularly, and the period from 8 September to 10 September will be kept for re-testing and unfinished work.

Risk 2: Failed Test Cases

Probability: 60%
Impact: High

Description: Some functions may not produce the expected result during testing. Failed cases can affect the overall acceptance result of Admission Tracker.

Mitigation and Contingency: Every failed test case will be recorded with its expected result, actual result, and status. The related function will be checked again during the re-testing period.

Risk 3: Incomplete System Implementation

Probability: 50%
Impact: High

Description: The current Admission Tracker project mainly focuses on the interface and user flow. Full backend and database implementation are not included, so some functions cannot be tested at a complete technical level.

Mitigation and Contingency: Testing will focus on the available interface, functional flow, and user interaction. Backend and database-level testing will remain outside the current testing scope.

Risk 4: Payment Flow Limitation

Probability: 45%
Impact: Medium

Description: The project contains a payment flow for preparation books, but a real payment gateway is not fully integrated. Therefore, real financial transactions cannot be verified.

Mitigation and Contingency: Only the visible payment flow and expected system response will be checked. Actual bank, bKash, or payment-gateway processing will not be included in the test scope.

Risk 5: Incorrect or Missing Test Data

Probability: 40%
Impact: Medium

Description: Incorrect SSC/HSC GPA, incomplete user information, or unsuitable input data may affect eligibility matching and other test results.

Mitigation and Contingency: Test data will be reviewed before execution. Both valid and invalid data will be used to check how the system responds in different situations.

Risk 6: Documentation or Formatting Error

Probability: 35%
Impact: Medium

Description: Missing information, incorrect table formatting, wrong dates, or incomplete screenshots may reduce the quality of the final SQT report.

Mitigation and Contingency: The complete report will be reviewed before submission. Test cases, results, schedule, figures, headings, and formatting will be checked one final time.

14. APPROVALS

The approval section confirms that the Admission Tracker test plan and SQT report have been prepared and reviewed. Signatures and dates can be added to the final printed copy. Industry approval is not included because industry review is optional and no industry-personnel review was conducted for this project. This follows the approval format used in the reference report.

Role	Name	Status
Project Lead / Test Manager	Brishty Das	Approved
QA Lead / Test Engineer	Brishty Das	Approved
Development and Documentation	Brishty Das	Approved
Course Supervisor / Instructor	Dr. Abhijit Bhowmik	Pending Approval
